
Poisson
NB global θ_g
NB conditional θ_{ng}
(a) calibration error (lower is better)
conditional θ stays calibrated everywhere
$|\log_2 r_{\text{var}}|$ (expressed)
0.6
0.4
0.2
0
no deficit
deficit, homog. θ
deficit, hetero. θ
deficit, bimodal θ
(b) signed r_{var} (= 1 calibrated)
= 1 calibrated
signed r_{var} (expressed)
1
0.8
0.6
0.4
0.2
0
no deficit
deficit, homog. θ
deficit, hetero. θ
deficit, bimodal θ
