(a)
F1 tightness ratio as an encoder diagnostic
F2 reconstruction of held-out genes
F3 variance calibration on expressed genes
F4 dispersion at a fixed mean and end to end: deficit, allocation, biological readouts
(b)
Worked example, known means
log2 decoded / real variance
2
0
−2
Poisson
shared per-gene
per-cell-type
type 1
(true variance 36)
type 2
(true variance 6)
